There are various kinds of softwares available to down using which you can encrypt your data and keep it systematically.

Drive Encryption Trial version 3.38 is a good software for just that. You can encrypt your flash usb memory stick or even your hard drives. The time taken to encrypt and decrypt is pretty less and the software on the whole is pretty easy to use.

The good part about these encryption softwares is that they support all file systems. So they will work with FAT16 FAT 32 and even NTFS systems.
